The New Freedom
A Call for the Emancipation of the Generous Energies of a People

Woodrow Wilson (1856–1924) was the 28th President of the United States, serving from 1913 to 1921. He was born in Virginia and grew up in Georgia and South Carolina. Educated at Davidson and Princeton, he went to law school for a year but then got a PhD in history and political science at Johns Hopkins. He taught at Cornell, Bryn Mawr, Wesleyan, and Princeton, where he rose to become President. A leader of the Progressive movement, he was elected Governor of New Jersey. Two years later, he won the Democratic nomination for the Presidency on the 46th ballot, and defeated sitting President William Howard Taft and former President Theodore Roosevelt in a three-way election with less than 42% of the vote. (Source: Woodrow Wilson, The New Freedom (New York and Garden City: Doubleday, Page and Company, 1913.))

I THE OLD ORDER CHANGETH

There is one great basic fact which underlies all the questions that are discussed on the political platform at the present moment. That singular fact is that nothing is done in this country as it was done twenty years ago.

We are in the presence of a new organization of society. Our life has broken away from the past. The life of America is not the life that it was twenty years ago; it is not the life that it was ten years ago. We have changed our economic conditions, absolutely, from top to bottom; and, with our economic society, the organization of our life. The old political formulas do not fit the present problems; they read now like documents taken out of a forgotten age. The older cries sound as if they belonged to a past age which men have almost forgotten. Things which used to be put into the party platforms of ten years ago would sound antiquated if put into a platform now. We are facing the necessity of fitting a new social organization, as we did once fit the old organization, to the happiness and prosperity of the great body of citizens; for we are conscious that the new order of society has not been made to fit and provide the convenience or prosperity of the average man. The life of the nation has grown infinitely varied. It does not centre now upon questions of governmental structure or of the distribution of governmental powers. It centres upon questions of the very structure and operation of society itself, of which government is only the instrument. Our development has run so fast and so far along the lines sketched in the earlier day of constitutional definition, has so crossed and interlaced those lines, has piled upon them such novel structures of trust and combination, has elaborated within them a life so manifold, so full of forces which transcend the boundaries of the country itself and fill the eyes of the world, that a new nation seems to have been created which the old formulas do not fit or afford a vital interpretation of.

We have come upon a very different age from any that preceded us. We have come upon an age when we do not do business in the way in which we used to do business,—when we do not carry on any of the operations of manufacture, sale, transportation, or communication as men used to carry them on. There is a sense in which in our day the individual has been submerged. In most parts of our country men work, not for themselves, not as partners in the old way in which they used to work, but generally as employees,—in a higher or lower grade,—of great corporations. There was a time when corporations played a very minor part in our business affairs, but now they play the chief part, and most men are the servants of corporations.
You know what happens when you are the servant of a corporation. You have in no instance access to the men who are really determining the policy of the corporation. If the corporation is doing the things that it ought not to do, you really have no voice in the matter and must obey the orders, and you have oftentimes with deep mortification to co-operate in the doing of things which you know are against the public interest. Your individuality is swallowed up in the individuality and purpose of a great organization.

It is true that, while most men are thus submerged in the corporation, a few, a very few, are exalted to a power which as individuals they could never have wielded. Through the great organizations of which they are the heads, a few are enabled to play a part unprecedented by anything in history in the control of the business operations of the country and in the determination of the happiness of great numbers of people.

Yesterday, and ever since history began, men were related to one another as individuals. To be sure there were the family, the Church, and the State, institutions which associated men in certain wide circles of relationship. But in the ordinary concerns of life, in the ordinary work, in the daily round, men dealt freely and directly with one another. To-day, the everyday relationships of men are largely with great impersonal concerns, with organizations, not with other individual men.

Now this is nothing short of a new social age, a new era of human relationships, a new stage-setting for the drama of life....

There is a great deal that needs reconstruction in the United States. I should like to take a census of the business men,—I mean the rank and file of the business men,—as to whether they think that business conditions in this country, or rather whether the organization of business in this country, is satisfactory or not. I know what they would say if they dared. If they could vote secretly they would vote overwhelmingly that the present organization of business was meant for the big fellows and was not meant for the little fellows; that it was meant for those who are at the top and was meant to exclude those who are at the bottom; that it was meant to shut out beginners, to prevent new entries in the race, to prevent the building up of competitive enterprises that would interfere with the monopolies which the great trusts have built up.

What this country needs above everything else is a body of laws which will look after the men who are on the make rather than the men who are already made. Because the men who are already made are not going to live indefinitely, and they are not always kind enough to leave sons as able and as honest as they are.

The originative part of America, the part of America that makes new enterprises, the part into which the ambitious and gifted workingman makes his way up, the class that saves, that plans, that organizes, that presently spreads its enterprises until they have a national scope and character,—that middle class is being more and more squeezed out by the processes which we have been taught to call processes of prosperity. Its members are sharing prosperity, no doubt; but what alarms me is that they are not originating prosperity. No country can afford to have its prosperity originated by a small controlling class. The treasury of America does not lie in the brains of the small body of men now in control of the great enterprises that have been concentrated under the direction of a very small number of persons. The treasury of America lies in those ambitions, those energies, that cannot be restricted to a special favored class. It depends upon the inventions of unknown men, upon the originations of unknown men, upon the
ambitions of unknown men. Every country is renewed out of the ranks of the unknown, not out of the ranks of those already famous and powerful and in control.

There has come over the land that un-American set of conditions which enables a small number of men who control the government to get favors from the government; by those favors to exclude their fellows from equal business opportunity; by those favors to extend a network of control that will presently dominate every industry in the country, and so make men forget the ancient time when America lay in every hamlet, when America was to be seen in every fair valley, when America displayed her great forces on the broad prairies, ran her fine fires of enterprise up over the mountain-sides and down into the bowels of the earth, and eager men were everywhere captains of industry, not employees; not looking to a distant city to find out what they might do, but looking about among their neighbors, finding credit according to their character, not according to their connections, finding credit in proportion to what was known to be in them and behind them, not in proportion to the securities they held that were approved where they were not known. In order to start an enterprise now, you have to be authenticated, in a perfectly impersonal way, not according to yourself, but according to what you own that somebody else approves of your owning. You cannot begin such an enterprise as those that have made America until you are so authenticated, until you have succeeded in obtaining the good-will of large allied capitalists. Is that freedom? That is dependence, not freedom.

We used to think in the old-fashioned days when life was very simple that all that government had to do was to put on a policeman's uniform, and say, "Now don't anybody hurt anybody else." We used to say that the ideal of government was for every man to be left alone and not interfered with, except when he interfered with somebody else; and that the best government was the government that did as little governing as possible. That was the idea that obtained in Jefferson's time. But we are coming now to realize that life is so complicated that we are not dealing with the old conditions, and that the law has to step in and create new conditions under which we may live, the conditions which will make it tolerable for us to live.

Let me illustrate what I mean: It used to be true in our cities that every family occupied a separate house of its own, that every family had its own little premises, that every family was separated in its life from every other family. That is no longer the case in our great cities. Families live in tenements, they live in flats, they live on floors; they are piled layer upon layer in the great tenement houses of our crowded districts, and not only are they piled layer upon layer, but they are associated room by room, so that there is in every room, sometimes, in our congested districts, a separate family. In some foreign countries they have made much more progress than we in handling these things. In the city of Glasgow, for example (Glasgow is one of the model cities of the world), they have made up their minds that the entries and the hallways of great tenements are public streets. Therefore, the policeman goes up the stairway, and patrols the corridors; the lighting department of the city sees to it that the halls are abundantly lighted. The city does not deceive itself into supposing that that great building is a unit from which the police are to keep out and the civic authority to be excluded, but it says: "These are public highways, and light is needed in them, and control by the authority of the city."

I liken that to our great modern industrial enterprises. A corporation is very like a large tenement house; it isn't the premises of a single commercial family; it is just as much a public affair as a tenement house is a network of public highways.
When you offer the securities of a great corporation to anybody who wishes to purchase them, you must open that corporation to the inspection of everybody who wants to purchase. There must, to follow out the figure of the tenement house, be lights along the corridors, there must be police patrolling the openings, there must be inspection wherever it is known that men may be deceived with regard to the contents of the premises. If we believe that fraud lies in wait for us, we must have the means of determining whether our suspicions are well founded or not. Similarly, the treatment of labor by the great corporations is not what it was in Jefferson's time. Whenever bodies of men employ bodies of men, it ceases to be a private relationship. So that when courts hold that workingmen cannot peaceably dissuade other workingmen from taking employment, as was held in a notable case in New Jersey, they simply show that their minds and understandings are lingering in an age which has passed away. This dealing of great bodies of men with other bodies of men is a matter of public scrutiny, and should be a matter of public regulation.

Similarly, it was no business of the law in the time of Jefferson to come into my house and see how I kept house. But when my house, when my so-called private property, became a great mine, and men went along dark corridors amidst every kind of danger in order to dig out of the bowels of the earth things necessary for the industries of a whole nation, and when it came about that no individual owned these mines, that they were owned by great stock companies, then all the old analogies absolutely collapsed and it became the right of the government to go down into these mines to see whether human beings were properly treated in them or not; to see whether accidents were properly safeguarded against; to see whether modern economical methods of using these inestimable riches of the earth were followed or were not followed. If somebody puts a derrick improperly secured on top of a building or overtopping the street, then the government of the city has the right to see that that derrick is so secured that you and I can walk under it and not be afraid that the heavens are going to fall on us. Likewise, in these great beehives where in every corridor swarm men of flesh and blood, it is the privilege of the government, whether of the State or of the United States, as the case may be, to see that human life is protected, that human lungs have something to breathe.

These, again, are merely illustrations of conditions. We are in a new world, struggling under old laws. As we go inspecting our lives to-day, surveying this new scene of centralized and complex society, we shall find many more things out of joint....

II WHAT IS PROGRESS?

A cynical but witty Englishman said, in a book, not long ago, that it was a mistake to say of a conspicuously successful man, eminent in his line of business, that you could not bribe a man like that, because, he said, the point about such men is that they have been bribed—not in the ordinary meaning of that word, not in any gross, corrupt sense, but they have achieved their great success by means of the existing order of things and therefore they have been put under bonds to see that that existing order of things is not changed; they are bribed to maintain the status quo.

It was for that reason that I used to say, when I had to do with the administration of an educational institution, that I should like to make the young gentlemen of the rising generation as unlike their fathers as possible. Not because their fathers lacked character or intelligence or knowledge or patriotism, but because their fathers, by reason of their advancing years and their established position in society, had lost touch with the processes of life; they had forgotten what it was to begin; they had forgotten what it was to rise; they had forgotten what it was to be
dominated by the circumstances of their life on their way up from the bottom to the top, and, therefore, they were out of sympathy with the creative, formative and progressive forces of society.

Progress! Did you ever reflect that that word is almost a new one? No word comes more often or more naturally to the lips of modern man, as if the thing it stands for were almost synonymous with life itself, and yet men through many thousand years never talked or thought of progress. They thought in the other direction. Their stories of heroisms and glory were tales of the past. The ancestor wore the heavier armor and carried the larger spear. "There were giants in those days." Now all that has altered. We think of the future, not the past, as the more glorious time in comparison with which the present is nothing. Progress, development,—those are modern words. The modern idea is to leave the past and press onward to something new.

But what is progress going to do with the past, and with the present? How is it going to treat them? With ignominy, or respect? Should it break with them altogether, or rise out of them, with its roots still deep in the older time? What attitude shall progressives take toward the existing order, toward those institutions of conservatism, the Constitution, the laws, and the courts?

Are those thoughtful men who fear that we are now about to disturb the ancient foundations of our institutions justified in their fear? If they are, we ought to go very slowly about the processes of change. If it is indeed true that we have grown tired of the institutions which we have so carefully and sedulously built up, then we ought to go very slowly and very carefully about the very dangerous task of altering them. We ought, therefore, to ask ourselves, first of all, whether thought in this country is tending to do anything by which we shall retrace our steps, or by which we shall change the whole direction of our development?

I believe, for one, that you cannot tear up ancient rootages and safely plant the tree of liberty in soil which is not native to it. I believe that the ancient traditions of a people are its ballast; you cannot make a tabula rasa upon which to write a political program. You cannot take a new sheet of paper and determine what your life shall be to-morrow. You must knit the new into the old. You cannot put a new patch on an old garment without ruining it; it must be not a patch, but something woven into the old fabric, of practically the same pattern, of the same texture and intention. If I did not believe that to be progressive was to preserve the essentials of our institutions, I for one could not be a progressive.

One of the chief benefits I used to derive from being president of a university was that I had the pleasure of entertaining thoughtful men from all over the world. I cannot tell you how much has dropped into my granary by their presence. I had been casting around in my mind for something by which to draw several parts of my political thought together when it was my good fortune to entertain a very interesting Scotsman who had been devoting himself to the philosophical thought of the seventeenth century. His talk was so engaging that it was delightful to hear him speak of anything, and presently there came out of the unexpected region of his thought the thing I had been waiting for. He called my attention to the fact that in every generation all sorts of speculation and thinking tend to fall under the formula of the dominant thought of the age. For example, after the Newtonian Theory of the universe had been developed, almost all thinking tended to express itself in the analogies of the Newtonian Theory, and since the Darwinian Theory has reigned amongst us, everybody is likely to express whatever he wishes to expound in terms of development and accommodation to environment.
Now, it came to me, as this interesting man talked, that the Constitution of the United States had been made under the dominion of the Newtonian Theory. You have only to read the papers of The Federalist to see that fact written on every page. They speak of the "checks and balances" of the Constitution, and use to express their idea the simile of the organization of the universe, and particularly of the solar system,—how by the attraction of gravitation the various parts are held in their orbits; and then they proceed to represent Congress, the Judiciary, and the President as a sort of imitation of the solar system.

They were only following the English Whigs, who gave Great Britain its modern constitution. Not that those Englishmen analyzed the matter, or had any theory about it; Englishmen care little for theories. It was a Frenchman, Montesquieu, who pointed out to them how faithfully they had copied Newton's description of the mechanism of the heavens.

The makers of our Federal Constitution read Montesquieu with true scientific enthusiasm. They were scientists in their way,—the best way of their age,—those fathers of the nation. Jefferson wrote of "the laws of Nature,"—and then by way of afterthought,—"and of Nature's God." And they constructed a government as they would have constructed an orrery,—to display the laws of nature. Politics in their thought was a variety of mechanics. The Constitution was founded on the law of gravitation. The government was to exist and move by virtue of the efficacy of "checks and balances."

The trouble with the theory is that government is not a machine, but a living thing. It falls, not under the theory of the universe, but under the theory of organic life. It is accountable to Darwin, not to Newton. It is modified by its environment, necessitated by its tasks, shaped to its functions by the sheer pressure of life. No living thing can have its organs offset against each other, as checks, and live. On the contrary, its life is dependent upon their quick co-operation, their ready response to the commands of instinct or intelligence, their amicable community of purpose. Government is not a body of blind forces; it is a body of men, with highly differentiated functions, no doubt, in our modern day, of specialization, with a common task and purpose. Their co-operation is indispensable, their warfare fatal. There can be no successful government without the intimate, instinctive co-ordination of the organs of life and action. This is not theory, but fact, and displays its force as fact, whatever theories may be thrown across its track. Living political constitutions must be Darwinian in structure and in practice. Society is a living organism and must obey the laws of life, not of mechanics; it must develop.

All that progressives ask or desire is permission—in an era when "development," "evolution," is the scientific word—to interpret the Constitution according to the Darwinian principle; all they ask is recognition of the fact that a nation is a living thing and not a machine.

Some citizens of this country have never got beyond the Declaration of Independence, signed in Philadelphia, July 4th, 1776. Their bosoms swell against George III, but they have no consciousness of the war for freedom that is going on to-day.

The Declaration of Independence did not mention the questions of our day. It is of no consequence to us unless we can translate its general terms into examples of the present day and substitute them in some vital way for the examples it itself gives, so concrete, so intimately involved in the circumstances of the day in which it was conceived and written. It is an eminently practical document, meant for the use of practical men; not a thesis for philosophers, but a whip for tyrants; not a theory of government, but a program of action. Unless we can
translate it into the questions of our own day, we are not worthy of it, we are not the sons of the
sires who acted in response to its challenge.

What form does the contest between tyranny and freedom take to-day? What is the special form
of tyranny we now fight? How does it endanger the rights of the people, and what do we mean to
do in order to make our contest against it effectual? What are to be the items of our new
declaration of independence?

By tyranny, as we now fight it, we mean control of the law, of legislation and adjudication, by
organizations which do not represent the people, by means which are private and selfish. We
mean, specifically, the conduct of our affairs and the shaping of our legislation in the interest of
special bodies of capital and those who organize their use. We mean the alliance, for this
purpose, of political machines with selfish business. We mean the exploitation of the people by
legal and political means. We have seen many of our governments under these influences cease
to be representative governments, cease to be governments representative of the people, and
become governments representative of special interests, controlled by machines, which in their
turn are not controlled by the people....

IX BENEVOLENCE, OR JUSTICE?

... It is perfectly clear to every man who has any vision of the immediate future, who can forecast
any part of it from the indications of the present, that we are just upon the threshold of a time
when the systematic life of this country will be sustained, or at least supplemented, at every point
by governmental activity. And we have now to determine what kind of governmental activity it
shall be; whether, in the first place, it shall be direct from the government itself, or whether it
shall be indirect, through instrumentalities which have already constituted themselves and which
stand ready to supersede the government.

I believe that the time has come when the governments of this country, both state and national,
have to set the stage, and set it very minutely and carefully, for the doing of justice to men in
every relationship of life. It has been free and easy with us so far; it has been go as you please; it
has been every man look out for himself; and we have continued to assume, up to this year when
every man is dealing, not with another man, in most cases, but with a body of men whom he has
not seen, that the relationships of property are the same that they always were. We have great
tasks before us, and we must enter on them as befits men charged with the responsibility of
shaping a new era.

We have a great program of governmental assistance ahead of us in the co-operative life of the
nation; but we dare not enter upon that program until we have freed the government. That is the
point. Benevolence never developed a man or a nation. We do not want a benevolent
government. We want a free and a just government. Every one of the great schemes of social
uplift which are now so much debated by noble people amongst us is based, when rightly
conceived, upon justice, not upon benevolence. It is based upon the right of men to breathe pure
air, to live; upon the right of women to bear children, and not to be overburdened so that disease
and breakdown will come upon them; upon the right of children to thrive and grow up and be
strong; upon all these fundamental things which appeal, indeed, to our hearts, but which our
minds perceive to be part of the fundamental justice of life.

Politics differs from philanthropy in this: that in philanthropy we sometimes do things through
pity merely, while in politics we act always, if we are righteous men, on grounds of justice and
large expediency for men in the mass. Sometimes in our pitiful sympathy with our fellow-men we must do things that are more than just. We must forgive men. We must help men who have gone wrong. We must sometimes help men who have gone criminally wrong. But the law does not forgive. It is its duty to equalize conditions, to make the path of right the path of safety and advantage, to see that every man has a fair chance to live and to serve himself, to see that injustice and wrong are not wrought upon any....

XII THE LIBERATION OF A PEOPLE'S VITAL ENERGIES

... What is liberty?

I have long had an image in my mind of what constitutes liberty. Suppose that I were building a great piece of powerful machinery, and suppose that I should so awkwardly and unskilfully assemble the parts of it that every time one part tried to move it would be interfered with by the others, and the whole thing would buckle up and be checked. Liberty for the several parts would consist in the best possible assembling and adjustment of them all, would it not? If you want the great piston of the engine to run with absolute freedom, give it absolutely perfect alignment and adjustment with the other parts of the machine, so that it is free, not because it is let alone or isolated, but because it has been associated most skilfully and carefully with the other parts of the great structure.

What it liberty? You say of the locomotive that it runs free. What do you mean? You mean that its parts are so assembled and adjusted that friction is reduced to a minimum, and that it has perfect adjustment. We say of a boat skimming the water with light foot, "How free she runs," when we mean, how perfectly she is adjusted to the force of the wind, how perfectly she obeys the great breath out of the heavens that fills her sails. Throw her head up into the wind and see how she will halt and stagger, how every sheet will shiver and her whole frame be shaken, how instantly she is "in irons," in the expressive phrase of the sea. She is free only when you have let her fall off again and have recovered once more her nice adjustment to the forces she must obey and cannot defy.

Human freedom consists in perfect adjustments of human interests and human activities and human energies....
